CLEANING, LAYING AND INSTALLATION RECOMMENDATIONS

The precious metals used on these decors (gold, silver, copper, lustres) have particular features:

- Instability of the point of colour (variable tone);
- Possible oxidation in the contact with the air and/or humidity;
- Delicacy of the surface.

Decors with Glass and Grits, manufactured with artisanal application of glasses and glass grits on the tiles surface, might show irregularities on their distribution. This does not compromise the aesthetic effect of the product. On the contrary, it enhances the artisanal features. Refined workmanship ceramic material with distinctive presence of the craquelé effect.

COLLOCATION: use fine-grained cement grout, without abrasive coarse parts (i.e. "glitter"). Immediately clean the grout using a soft sponge taking care to rinse often with clean water.

DO NOT USE ACIDS AND/OR ABRASIVE SPONGES.

To clean these special pieces simply use a soft cloth (such as microfiber or cotton) and alcohol. **ABSOLUTELY DO NOT USE:** harsh cleansers (acid, calcium removing etc.) and/or abrasive sponges or tools. In case of oxidation, scrub gently with a soft cloth to obtain the original brilliance.

INSTALLATION: it is recommended that the tile installers to protect, before proceeding with laying and grouting, the entire perimeter of the slab by applying paper tape on the glazed surface.
